EXERCISE: 7

# ONLINE PURCHASING SYSTEM

## Aim:

To design an Use Case diagram for **Online Purchasing System** that enables web customers to view items, register, and make purchases efficiently.

## Procedure:

1. Identify the key functions required for an online purchase.
2. Define interactions between the web customer and the system.
3. Structure the system to support item viewing, user registration, and order placement.
4. Implement a secure transaction and order processing system.
5. Verify the system for accuracy and user-friendliness.

## USE CASE DIAGRAM:

## Result:

A well-structured **Online Purchasing System** is created to facilitate item browsing, customer registration, and secure order placement.
